

Weekly Report

Items from Last Report:

1. PCB Debugging: We are developing a prototype with an old PCB board. We completed the prototype after desoldering sensors and testing them.

2. Microcontroller Investigation: For the prototype we will be using an ESP32 that has 8 ADC channels

Current Issues:

1. There are no issues.

Goals for Current Week:

1. Prototype Testing: Fill the water tank and receive real-time data. Develop firmware to have a basic display of the pressure sensor data.

Short Term Goal:

1. Hardware MVP: The hardware will be able to read a signal from the pressure sensors as a minimum viable product.

Long Term Goal:

1. Sensor Signal System: The entire system will deliver a functional sensor and decoder setup capable of outputting the clean signal required for fish wake data analysis. July 30, 2026
